How does the PASS Box™ work?

The current supply chain utilized by the market is unnecessarily costly and frustratingly time consuming. With multiple handlings between a variety of transport and storage vessels, product quality goes down and prices go up.

The PASS Box™ allows customers to cut out all of that unnecessary handling time and cost. Our system brings secured, high quality product from the supplier to the user in a single, intermodal device.

Value to Customers

Where is their money
being wasted today?

- Multiple handlings
- Product contamination
- Time-wasting delays
- Costly demurrage fees

By taking advantage of our system that is...

- Fully enclosed (contamination free)
- Portable (via crane, forklift, or roll-off)
- Stackable (2x in transit, 4x on site)
- Intermodal (road, rail, river, or sea)

... customers can:

Simplify logistics.

Reduce costs.

Increase business.

Value to Customers

In a side-by-side case study analysis, customers saved between 30-40% on handling & logistics costs.

Bakken Study:

PASS™ Box saves **\$53.94/ton**
42.30%
*Excluding product & rail freight costs

Eagleford Study:

PASS™ Box saves **\$25.10/ton**
29.65%
*Excluding product & rail freight costs

The PASS Box™ design also allows customers to utilize *intermodal rail services* in unit train shipments rather than being limited to traditional bulk shipping in manifest delivery.

This opens the door to as much as **40% reduction in freight cost** over traditional methods.

****That's an average savings of roughly \$2,000/car.****
